Who we are and what we do in REINFORCE

The CEA-LITEN is a research institute focused on developing sustainable energy technologies in the battery, solar and hydrogen domains. The institute aims to support the transition to a low-carbon economy through innovation and collaboration with industry partners.

Who we are

Within the REINFORCE project, CEA's primary contributions lie in the development of State-of-Health diagnostic methods for 2nd life battery assessment, in the establishment of safety procedures for the dismantling process and in the early thermal runaway detection in the transportation of end-of-life batteries.

These efforts are crucial for advancing the development and economic viability of 2nd life batteries value chain.
