Who we are and what we do in REINFORCE

INEGI is an RTO driving innovation through applied research, specialised in advanced manufacturing, materials, and energy.

INEGI leverage ecodesign and data science from concept to production to create sustainable, cutting-edge solutions.

INEGI expertise encompasses digital twins, virtual reality, and human-centred engineering, powering advancements in batteries, space, and beyond.

INEGI coordinates this European project and supports the growth of emerging segments in the battery value chain, driving industrial, technological, and process innovations crucial for reintegrating EV and stationary batteries into second-life applications.

INEGI plays a key role in bringing these innovations to market by overseeing the deployment of SUNDIAL, an in-house data collection platform for sustainability analyses, business model exploration, and business model simulation.

This platform serves as a decision-support tool for stakeholders, allowing them to model different scenarios and forecast potential outcomes. It ultimately promotes the adoption of business models that accelerate the transition to a circular economy in the battery sector.

Additionally, INEGI contributes to sustainability analyses by conducting cost assessments to ensure the development of economically viable and sustainable systems.
